## EXPERIENCE

**SDE Intern - NeuroinkX** (Hyderabad) sept 2025 - nov 2025

- **D**esigned and optimized the backend architecture of a 3D printing platform, enabling seamless coordination between users, vendors, and end-to-end printing workflows, including order management, job processing, and status tracking.
- Developed job tracking and monitoring mechanisms to provide real-time visibility into print status, progress, and completion.
- Optimized server-side logic, database queries, and API performance.

**FreeLance Dev Contract - RechargePayment** (remote) Jun 2025 – July 2025

- Enhanced a Werkzeug module to handle payment failures and network timeouts gracefully by introducing structured exception handling, retry logic, and reliable recovery flows, improving overall system resilience.
- Ensured data integrity and security by implementing cryptographic signature verification, validating incoming requests against strict schemas, and enforcing controlled access to sensitive transaction data through role-based and permission-based checks.
- implemented mail service as batch process invoice request at period of time.

**Recent works**

- Running FableFrame, Delivered end to end projects like CoreGym, Pdf Pivot, ImagesPivot, and currently working on Gigs Find project.
- Building RSVP as a contributor at TeamShiksha.

## ACHIEVEMENTS

**Recent Open Source Contributions**

- #12657 - Added a complete callback to both move and delete calls for spinner issue by adding time delay.
- #306 - Implements a message compression system with manual /compact command and automatic context management via auto-compact. Reduces token usage by compressing conversation history while preserving essential information, enabling longer conversations within model context limits.

**Hackathon Winnings – Hacktropica 2025**, NSAC 2024

- Runner-Up among 1000+ teams by developing an AI/IoT-based smart farming system (real-time soil monitoring & automated irrigation) and a virtual audience simulation platform.
- Create end to end MQTT sever + root Server with websocket, to maintain continues data flow, and add queue for maintain traffic.

## TECHNICAL SKILLS

- **Languages:** Java, Python, TypeScript, SQL.
- **Frameworks & Libraries:** React.js, Next Js, Gin, FastApi, celery, Socket.io, Node JS.
- **Cloud & DevOps:** AWS(ec2, s3), Docker, Redis.
- **Data Tools:** MongoDB, PostgreSQL, Supabase.
- **Tools & Technologies:** Git, GitHub, CMD, Postman.
- **cs fundamentals:** Data Structures & Algorithms, OOP, System Design (basic).

## PROJECTS

**ImagesPivot - Secured, lightweight Images, audio, video transform platform** | Code *Jan 2026 - April 2026*

- **Technologies** : FastApi, Celery, Redis, Typescript, Docker, Next JS
- Built a media processing platform supporting image, audio, and video conversion with current 100+ users and 50K+ request served.
- Focused on performance, speed, and privacy first processing as slug based feature with background jobs through queue.
- Multilanguaged based platform with paid user support and org based ticket system.

**Krishi Mitra - smart farming application** | Code *April 2025*

- **Technologies** : React.js, TypeScript, PostgreSQL, webSocket, REST Api, ESP32
- **E**ngineered a real-time data streaming system from IoT devices to web dashboards, improving data refresh rate.
- Implemented AI models for crop recommendation and disease prediction, enabling data-driven farming decisions that increased irrigation efficiency.
- Developed and deployed a secure, responsive UI using React.js and Tailwind CSS.

## EDUCATION

**Computer Science & Engineering** *August 2022 – 2026(Expected)*

Makaut University - Nshm Knowledge Campus, Durgapur *CGPA: 7.8/10.0*
